Choice and Rare
Hardy Plants
and Shrubs

Members Women's National Farm and Garden Association and The Royal Horticultural Society Great Britain

Tenth Edition

ATTENTION

To encourage the use of plants in larger quantities and to discourage the planting of one plant of a variety, we have raised the price of a single plant, but have also offered three plants of a variety at the dozen rate, instead of six, as formerly.

We trust our customers will agree with us, that the practice of planting one plant of a variety is most undesirable from every standpoint. E WISH to express our appreciation of the interest shown by garden lovers in the pioneer work we are doing in this country. It is a good deal of an undertaking to bring to the public a collection of choice varieties which are little known by the majority of gardeners. But the interest is great and the desire to learn very sincere, which encourages us to forge ahead and give the people in our own America the opportunity to add to their gardens the choicest of the European gems. As they become better known, the only wonder will be that we have deprived ourselves of the pleasure of growing them for so long a time.

We specialize on the desirable new and rare varieties of Hardy Plants and Alpines, as they make their appearance abroad or in this country.

We hope you will appreciate our efforts to give garden lovers the best obtainable; often secured from private sources, where years of patient toil and care have rewarded the grower.

Our plants are strong, vigorous stock and, grown in our trying climate, we can assure their hardiness anywhere.

We are always glad to give all the assistance possible to our patrons, by giving them any information desired as to the especial requirements of any plant.

Our stock is all field grown, insuring the strongest, healthiest constitution possible. This is the forerunner of certain success when transplanted to your garden. We do not advocate pot grown plants for anything but the greenhouse.

We use the utmost care in shipping stock. Plants and Shrubs are not dug and then left around to dry out; but each order is dug separately, put into receptacles filled with wet, sphagnum moss, and brought immediately to the shipping room. Each plant is then wrapped in wet moss and oiled paper, that they may keep fresh from the start to the finish of their journey.

All of this is expensive; but it insures to the customer plants that are in good condition when received.

We would like to call attention to the fact that ALL plants require a thorough preparation of the soil if they are to thrive and make a vigorous growth.

First, stake out the plot of ground to be planted. Dig a trench at least two feet deep; three is better. Half fill this trench with coarse, strawy manure. Tread down well and cover heavily with dirt and tread again. Then add a thick layer of rotted manure. more dirt, and tread again. Now cover the surface with good, black loam. This will furnish good soil well removed from any manure, for the young, tender roots of your new plants. The fertilizer down deep induces the roots to go down after it and so gives them protection from heat and drought during the summer and from frost during the winter.

Keep the surface of the soil loose by frequent stirring. If watering is done, water at least an hour in one place (using a fine spray) and then do not sprinkle there again for a week. Frequent watering is worse than none at all, as it induces the roots to come to the surface, instead of striking down deep, as they should.

Our prices are based on the time and care it takes to grow the stock and are neither ridiculously cheap nor excessively high; but on a basis that will insure our customers good stock, true to name, and give us a reasonable profit. Nearly all of our Alpines are two years old, and some three, before we send them out; a fact little known or appreciated, for all gardeners know that labor is expensive.

WE MAKE ALL SHIPMENTS BY EXPRESS, CUSTOMERS TO PAY CHARGES, UNLESS OTHERWISE REQUESTED. If desiring shipment by PARCEL POST, add 10% extra for points east of the Mississippi; 15% extra for points west of the Mississippi.

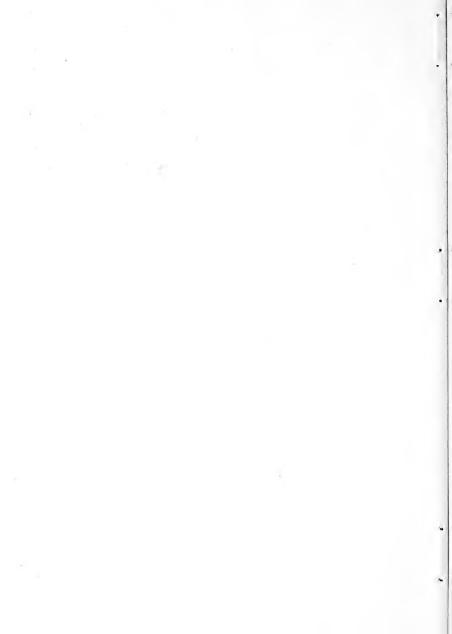

We will replace any goods lost or damaged in transit, but report of same must be made IMMEDIATELY.

TERMS—Cash with order, unless it is desired to open an account with us. In that case, please send financial references.

No account opened for less than an initial order of \$10.00.

Not less than **three plants** of the same variety supplied at the dozen rate.

No Discount Rates made to Estates, Parks, Landscape Architects, or other parties not in the Nursery Business.

Alpine Gardens

O MANY, the idea of a Rock Garden seems to be an exposition of stone. The real object of a Rock Garden is to enable one to grow in their own gardens the natives of the high mountains, where snows are deep and summers very short. To be sure, all plants grown in the rockery are not natives of the Alpine regions; but the great majority are, and while the beginner is apt to feel that this is a most difficult branch of gardening, it is only necessary to begin with the many easy subjects to find it not only comparatively simple but immensely fascinating as well, and a branch that opens up entirely new delights in gardening.

All gardeners cannot, of course, have extensive Rock Gardens, nor is it necessary; for a wonderful collection of rock plants can be grown in a small space. Nearly all grounds have a bank or wall that can be converted into a most bewitching spot with the aid of rock plants.

As a rule, Alpine Plants are so miniature that they at once appeal to the protective instinct, and while they appear so delicate as to make one feel they must be most difficult to grow, many of them are of as easy culture as a rose. As for the more difficult kinds, one need not attempt these until their experience grows, and it is always an incentive to greater effort to know there are delights just beyond.

It may be of assistance if we give a few suggestions as to the construction of a Rock Garden. First of all, the drainage must be perfect, for no Alpine Plant will survive a stagnant condition of the soil. If underground moisture can be supplied by means of minutely perforated pipe, so much the better. This is to supply, in a small way, the melting snows, to which all Alpines are accustomed, and should be so arranged that the water can be turned off and on at will.

Contrary to common impression, Alpines require something beside ashes and tin cans upon which to grow. While they do require a very stony soil, they need good soil mixed with the stones; more or less, according to the subjects being planted.

We have found that a soil mixture consisting of one-half peat, one-fourth leaf mould and one-fourth clay loam is well adapted to the successful growth of nearly all Alpines.

In building a Rock Garden, dismiss the idea of making "pockets" for your plants. This method was discarded long ago as being very unsuccessful. The soil in pockets is quickly exhausted, as well as the moisture, and after the plant has made its first growth, becomes stunted and soon dies.

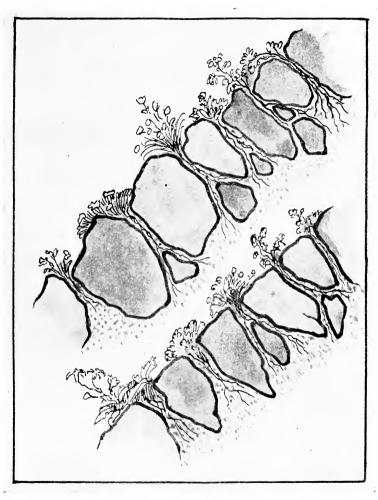

All Alpines are deep rooting. This fact should never be forgotten and when building rockery, wall or bank, ample depth should be provided. It is a **deep, cool root run**, under the stones, that is required for success.

Next in importance, is a thorough ramming of the soil, to preclude the possibility of any air spaces. This one mistake is the cause of more failures in planting, IN ANY KIND OF A GARDEN, than any other one thing. THE SOIL CANNOT BE PACKED TOO TIGHT AROUND THE ROOTS. But in addition, THE SOIL MUST BE LOOSE ON TOP, that the rain may easily penetrate it, that the roots may breathe, and that there may be a mulch to keep the roots cool and moist.

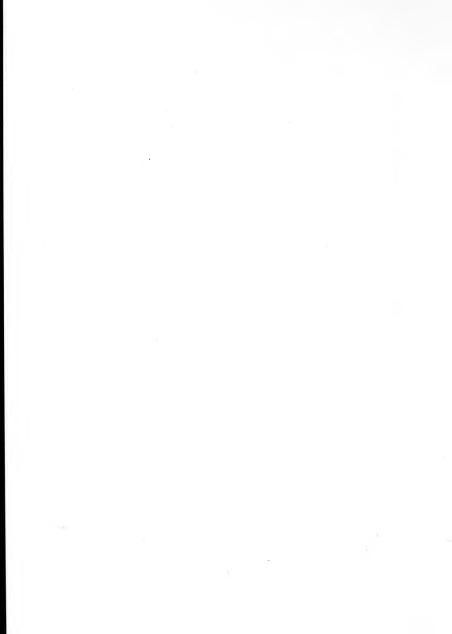

Alpine plants need to be planted in masses of one kind to obtain good color effects. This applies to all garden planting; but to Alpines most of all, as they are so small.

We have listed no plants too difficult for the ordinary gardener to grow, as we realize we have few Alpine specialists in this country at the present time. When our garden lovers become acquainted with the charms of these plants, we prophesy there will be many such enthusiasts.

A list of plants for special places will be found in the back of the catalog.

CROSS SECTION DIAGRAM SHOWING POSITION OF STONE FOR WALL OR ALPINE GARDEN

ACANTHUS—Bear's Breech

Hardy Perennial

Plants of temperate climate from the Old World and suitable for the background of borders and bold effects. They are valued for their highly ornamental foliage rather than for their bloom. They require a rich, well drained soil and a warm, sunny situation.

A. latifolius—A tropical looking plant with large,	
shining, leathery foliage. Loose spikes of pale	
purple flowers from June to August. 5 ft\$0.75	\$ 5.00
A. mollis—Smaller than the foregoing, growing to	
a height of about three feet. Spikes of liles and	

ACHILLEA-Milfoil or Yarrow

Hardy Perennial

Well known border plants, suitable for dry and sunny places.

A. ageratifolia—Tufted growth with silvery leaves

white flowers

and white flowers. Blooms in May and June. Fine for rockery. 3 in\$	0.75	\$ 5.00
A. Clavennea—Compact tufts of silver foliage with a profusion of white flowers from July to September. Rockery	.75	5.00
A. ptarmica "Boule de Neige"—An improved		

flowers of a purer white than the type	.35	2.50
A. ptarmica "The Pearl"—Double pure white		
flowers	.35	2.50

ACONITUM—Monkshood

Hardy Perennia!

Aconitums are very stately and beautiful plants for the hardy border. Exceedingly valuable on account of their late bloom as well as for planting in shade, as they will flourish even under trees. Thrive best in very rich soil and prefer not to be disturbed when once established.

F	Each	Per	Doz.
A. Fischeri—Semi-dwarf variety with large, pale blue flowers. Commences to bloom in Sept	80.50	\$	3.50
A. Sparks' Variety—Very dark blue. Blooms early	.50		3.50
A. Wilsoni—Very handsome variety, introduced from China by Mr. Wilson. Large, violet-blue flowers from September until frost	.75		5.00
ÆTHIONEMA—Lebanon Candy Hardy Percnnial	/tuft	•	
Near relatives of the Candytuft, these hardy little rock plants are of the most fascinating character. The foliage of most of them is a beautiful, glaucous blue; stems woody, and when covered with their heads of pink or white blossoms, make a picture not to be forgotten.			
They are almost shrubby in habit and are improved by a slight cutting back after blooming. Stony, sandy loam is suitable for them and a warm, sunny position. Given these conditions, they will grow more beautiful every year.			
A. armenum—A gem of only three or four inches high, blue gray leaves and charming pink blossoms in close heads	80.75 .75	\$	5.00 7.50
A. grandiflorum—The giant of the race, reaching a height of 12 inches, with large and beautiful heads of rose colored bloom	,75		7.50
A. Kotschyanum—A new variety of great beauty. Very rare	,75		7.50
A. pulchellum—Another beauty with very glaucous leaves and heads of rosy pink flowers. About six inches high. One of the best	,75		5.00
A. schistosum—Forms a compact little plant with beautiful large pink blossoms	.75		5.00

7.50

ALYSSUM-Mad Wort

Hardy Percnnial

Beautiful, showy plants for rock work, bedding, etc. They like a sunny position and well drained soil.

90		
A. alpestre (rostratum)—Prostrate, almost shrubby variety, hoary grey all over. Flowers pale yellow, in unbranched heads. Very early	0.50	\$ 3.50
A. argenteum—Dense growth. Leaves silvery beneath, flowers yellow in clustered heads, all summer. About 15 in	.75	5.00
A. orientale—Very showy variety, growing about a foot high and bearing large corymbs of bright yellow flowers	.35	2.50
A. saxatile citrinum—Very attractive variety with paler yellow flowers than the type	.35	2.50
A. "Silver Queen"—A very beautiful variety from England. Masses of pale yellow blooms	.50	3.50
A. serpyllifolium—Very dwarf, 4 inches to 5 inches high, with racemes of pale yellow flowers and rough, hoary leaves. Charming for the rock garden. Very rare	.75	5.00
A. spinosum—A woody stemmed plant with silvery leaves and numerous small, yellow blossoms. About 6 in. high and very branching habit. A gem for the rock garden	.75	5.00
A. spinosum roseum—A very choice rose colored form of the above. Very scarce	.75	7.50

ANCHUSA—Alkanet

Hardy Perennial

Anchusas grow readily in ordinary soil in sunny situations but quickly respond to good feeding. Their large hairy leaves and tall spikes of beautiful blue flowers make a fine background in borders. Physostegia is very effective planted in front of them, as the latter takes their place when through flowering.

Each	Per Doz.
A. italica—"Dropmore Variety"—A beautiful variety of the Italian Alkanet with numerous flowers of deepest gentian blue. In good soil will reach a height of six to seven feet with numerous side branches, making a most imposing plant. Re-	
quires staking\$0.35	\$ 2.50
A. italica—"Opal"—A charming light blue variety. Identical with above except color	3.50
ANDROSACE—Rock Jasmine Hardy Perennial	
Haray Perenmai	
Typical Alpines, most fascinating because of their great beauty. Many of them are difficult to grow, their worst enemy being early spring rains. We are listing only the easiest. They require very gritty soil, the stones furnishing the cool moisture their roots enjoy. In sticky clay or hot, loose sand, they will soon dwindle and die. A. lactea—Glossy green foliage and loose heads of lovely white flowers with golden eye. Very hardy and vigorous	\$ 7.50
A. lanuginosa—One of the most beautiful. Trailing growth and soft, silvery foliage. The blossoms are soft lilac-rose, lasting nearly all the summer	7.50
	1.00
A. primuloides—Rosettes of very silky foliage and heads of rosy lilac blossoms on stems 4 inches	
high. May	7.50
A. sarmentosa—One of the easiest and best. Rosettes of silky foliage and heads of verbena-like blossoms of pink on stems about six inches high. From the Himalayas. June-July	7.50
ANEMONE—Wind Flower	
Hardy Perennial	
Lovely, graceful Alpines, in most cases delighting in cool, moist conditions.	
A. pennsylvanica—A native variety with single, pure white flowers, on stems 12 to 18 inches high.	
Moist soil in full sun\$0.35	\$ 2.50

No discount made to Estates, Parks, Landscape Architects or others not in the Nursery business.

Each	Per Doz.
A. pulsatilla—(pasque flower)—A fine plant for either rockery or border. Lovely violet cups filled with golden stamens. Well drained position in full sun. April-May	\$ 3.50
A. sylvestris—Fine for cool, moist corner of rock garden or border. Large white blossoms on nodding stems of about 12 inches. Very free blooming. May-June	3.50
A. vernalis—(Lady of the Snow)—A rare and exquisite alpine. Large, open flowers of pure white, flushed violet outside. Blooms very early. Easily grown in rich vegetable soil in full sun. Very	
choice	7.50
ANTIRRHINUM—Snapdragon Hardy Perennial	
The ordinary snapdragons are of too coarse growth to be admitted to the rock garden, but there are two or three species that are very charming for the rockery. A dry, sunny spot and well drained soil are essential to success.	
A. Asarina—A trailing plant from the south of France with very attractive foliage and creamy white flowers. June	\$ 3.50
A. sempervirens—A beautiful trailing plant for the rock garden. Flowers white with purple blotch. June-July	3.50
ANTHYLLIS—Vetch Hardy Perennial	
A. montana—Somewhat shrubby plant about one foot high with silky foliage and dense heads of pink blossoms. Very easy culture and much prized for the rock garden	\$ 5.00

AQUILEGIA—Columbine

Hardy Perennial

The Aquilegias need no praise; they appeal to everyone by their grace and the beauty of their flowers, the colors of the new hybrids being particu-

5.00

ARABIS-Rock Cress

Hardy Perennial

One of the most common of rock plants. Ordinary soil is suitable but they must have a sunny position. We offer the best of the many varieties.

A. albida—A very vigorous rock-cress with gray leaves and countless spikes of white flowers nearly the whole summer\$	0.35	\$ 2.50
A. alpina superba—Large, pure white flowers. Fine for edging and for rockery	.35	2.50
A. arenosa—An attractive variety with white flowers in heads borne on slender stems of 8 to 10 inches	.35	2.50
A. aubrictioides—A beautiful variety of rock-cress, bearing a profusion of delicate pink flowers	.75	5.00
A. procurrens—A dwarf spreader for cool rocks. Flowers white on long stems	.50	3.50
A. rosea—Very dwarf species with an abundance of rose colored flowers	.50	3.50
A. Sturii—A gem for the sunny rock garden. Forms cushions of glossy, dark green foliage. Large heads of white blossoms on stems 2 or 3 inches high	.75	5.00

ARENARIA—Sand Wort

Hardy Perennial

As their name implies, the majority of these plants do best in sand and full sun. Beautiful and of easy culture, they are most at home in the rock garden.

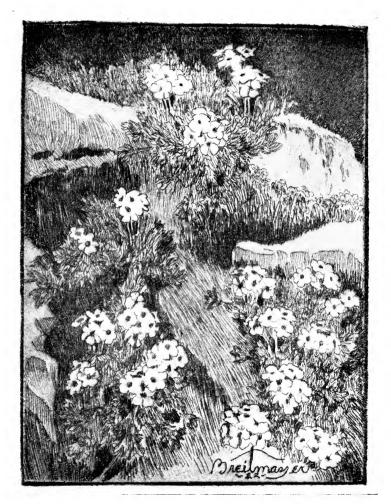

E	ach	Per Doz.
A. Balearica—Creeping plant with dark green foliage and white blossoms. A gem for cool, shady places in the rockery, especially for clothing bare rocks	0.35	\$ 2.50
A. cæspitosa—A close tufted plant of mossy growth, studded with white flowers all summer. Charming for the rock garden	.35	2.50
A. decussata—Trailing foliage of bright green and a profusion of small white flowers in spring	,50	3.50
A. foliosa—Fine greyish foliage, forming close tufts. Flowers white on stems of 6 inches	.50	3.50
A. gracilis—Very new, and as its name indicates, of slender, graceful growth. Fine for rock garden	.35	2.50
A. juniperiana — Fine, greyish foliage forming tufts, covered with slender stems of small white flowers	.50	3.50
A. montana—Creeping variety, forming mounds of green which in early summer are covered with large white blossoms. Indispensable for the rockery	.35	2.50
A. pinifolia—Dense tufts of close rosettes. Small white flowers on loose stems of 5 inches	.50	3.50

ARMERIA—Sea Pink or Thrift

Hardy Perennial

Small perennials, with leaves in rosettes close to the ground. Very easy culture, preferring a sunny position in light soil.

A. cæspitosa vera—Very rare. Spiny leaves, forming very compact rosettes. Pink flowers. Rockery\$0.75	\$ 5.00
A. cephalotes—Long, narrow foliage with heads of bloom of light rose color on long stems. Very	
attractive	2.50
A. cephalotes rubra—Flowers a deeper pink	2.50

ANDROSACE SARMENTOSA

ARTEMISIA—Wormwood

Hardy Perennial

ASTER—Starwort

Hardy Perennial

A. alpinus—Very effective plants for the rock garden or edge of hardy border. Bear large, showy purple flowers in May and June\$0.35	\$ 2.50
A. alpinus albus—A white form of the Alpine Aster	2.50
A. baldensis—A form of the Alpine Aster, having branching stems carrying several blossoms of a more rosy hue than the type. Very choice	5.00
A. alpinus himalaicus—More dwarf than the type and bearing a profusion of lilac blue flowers. Very choice	5.00
A. alpinus Magnificus—Handsome variety with pure white flowers	5.00
A. subcærulea—A very handsome dwarf aster. Tufted foliage, slightly hairy, with large, solitary flowers of pale blue with golden centers, making a most beautiful combination	3.50

ASTILBE—Meadow Sweet

Hardy Perennial

Handsome border plants, especially suited to moist or half shady places. Extremely graceful and not known as well as they should be.

	lach	Per Doz.
A. Davidii —One of the best of the large Astilbes and particularly fine in boggy places, producing graceful plumes of rich crimson purple with violet anthers; 4-5 ft	80.50	\$ 3.50
A. Etna—Beautiful rose pink blooms. Very new	.50	3.50
A. grandis—A fine species, growing five to six feet tall and bearing immense panicles of white flowers	,50	3.50
A. Rubens—A recent introduction of great beauty, producing large panicles of the deepest rose colored blooms	,50	3.50
A. Salmon Queen—Beautiful salmon pink	.50	3.50
A. Vesta—Graceful plumes of lilac-rose	.50	3.50
AUBRETIA—Wall Cress Hardy Perennial The rock garden could ill afford to do without its wonderful masses of Aubretia that give such a rare color during April and May and which are among the most easily grown and the most showy of all rock plants. They form spreading tufts and are never seen at their best on the flat, but should be so placed that they may droop over some mound of soil or cover the face of a rock, or fall from the top of a rockery wall. A light loamy soil meets their requirements and after the flowers are over the plants should be cut back well, that the tufts may not become bare in the center. We offer the best of the new-named varieties.		
A. Bridesmaid—Pale rosy blush	0.50	\$ 5.00
A. Cilicica—One of the best—flowers large and freely produced. Lavender with white eye	.50	5.00
A. Fire King—Glowing Crimson—Very fine	.50	5.00

A. Cilicica—One of the best—flowers large and freely produced. Lavender with white eye	.50	5.00
A. Fire King—Glowing Crimson—Very fine	.50	5.00
A. H. Marshall —Rich deep mauve colored flowers; late	.50	5.00
A. Leichtlini—Bright rose colored flowers	.50	5.00
A. Pritchard's A-1—New—Violet flowers; compact habit; one of the finest	.50	5.00

BELLIS—Daisy

Hardy Perennial

Nearly everyone is familiar with the common hardy daisy, but the improved form of these delightful plants is a surprise to those who see them for the first time. The size of bloom has been increased until the choicer varieties are as large as small asters. Fine for edgings..

B. Monstrosum—A monster variety of the hardy English Daisy. New, pure white; 6 inches\$	0.35	\$	2.50
B. Pink Beauty—Deep pink, very handsome; 6 inches	.35		$2.50^{\overset{.}{\overset{.}{0}}}$
B. alpinus—Alpine Daisy—A graceful, spreading plant, growing about six inches high and covered with dainty pink and white single flowers throughout the summer and autumn	.35		2.50
B. cærulescens — An exceptionally dainty little plant, flowers white, tinted lilac. Requires a warm site. Fine for the rockery; 3 inches	.35		2.50
Bellium Bellidiæides—A dainty little miniature of the Bellis perennis, except that it throws out nu- merous runners and so forms a wide mat, covered in summer with small white daisies. Fine for		į.	
rockery	.50		3.50

BOCCONIA—Plume Poppy

Hardy Perennial

Three plants of one variety at the dozen rate.

BOYKINIA

Hardy Perennial

CAMPANULAS—Bellflowers

Hardy Perennials and Biennials

The Bellflowers are for the most part of a very elegant habit and beautiful appearance. The perennial varieties are all of great beauty, the taller ones being suitable for the border and very valuable as cut flowers, while the dwarfer sorts are well adapted for the front of borders and for rockeries. The most of the varieties are easily grown and unless otherwise specified, prefer a well-drained, rather rich sandy loam. Those adapted to rockery culture are among the choicest of perennial plants.

- C. barbata—So called because of the hairs inside the blooms. It requires a well-drained soil, containing plenty of stones, and more sun than most of bell-flowers. The handsome pale blue flowers are produced from May to July, on stems about 6 inches high
- C. carpatica—"Isabel"—Very handsome variety of the Carpathian bell-flower, with large flat saucers of a beautiful deep blue; 1 ft.

5.00

	ch	Per Doz.
C. carpatica—"Riverslea"—A dwarf tufted plant, bearing large, flat, saucer-shaped flowers of a pale blue, on slender stems, about 1 ft. high\$0	.50	\$ 3.50
C. carpatica—"Selected White"—An extra large and selected variety of the Carpathian Harebell. Pure white flowers, freely produced	.50	3.50
C. collina—A glorious campanula from the highest ranges of the Caucasian Mountains. Tufted growth with graceful, purple blossoms on stems about 1 ft. high, in June. Very choice	.75	5.00
C. fenestrellata—A rare form of C. garganica, with pale blue flowers. From the Croatian Mountains	.75	5.00
C. garganica—A gem for the rock garden. Forms a low, spreading tuft which in June is covered with starry, light blue flowers having a white eye. Exquisite hanging over a rock	.75	5.00
C. garganica—"W. H. Paine"—Improved form of of this charming Italian belifiower. Large, bright violet flowers with white center. More upright in habit than type. A striking plant	.75	7.50
C. glomerata Dahurica—Large heads of purple flowers. Fine for the border; 2 ft	,35	2.50
C. grandis—A handsome plant with tall spikes of blue flowers; 3 feet	.50	3.50
C. Grossecki—A handsome species with large leaves, heart-shaped and coarsely toothed. Flowers all summer, violet, in long racemes; 5 ft	.35	2.50
C. istriaca — A prostrate bellflower with hairy leaves and beautiful, wide open blossoms of blue	.75	7.50
C. Kolentiana—A lovely species from the Caucasian Mountains. Erect stems of nodding violet-blue bells, about 2 ft. high. Biennial, but seeds freely and should be in every garden	.75	5.00
C. lactiflora alba magnifica — A beautiful variety from the Imperial gardens of Petrograd, produc- ing spikes 6 ft. high, bearing large, snowy-white flowers. New and choice. The true variety	.75	5.00

	ach	Per Doz.
 C. lactiflora—"E. Molyneux"—A giant form of C. lactiflora, bearing immense panicles of light blue flowers. Very effective for the hardy garden\$ 	0.75	\$ 5.00
C. lactiflora grandiflora — Very distinct. Pretty blue flowers in large heads. Flowers from July to September; 4 ft.	.75	5.00
C. latifolia—A strong growing variety, 3 to 5 ft. high. Flowers in July, blue	.35	2.50
C. latifolia—"Brantwood"—A dwarf variety, only reaching a height of 2 ft. Very large, dark blue bells on sturdy stems	.50	3.50
C. latifolia eriocarpa—Not so tall as the type. Better habit and a fine variety, producing large flowers of a brilliant violet purple in June and July; 3 ft.	.75	5.00
C. latifolia macrantha—Tall and handsome species with royal purple flowers, 2 inches long, trumpetshaped. Suitable for the border or wild garden.	.35	2.50
C. longistyla—A most beautiful Campanula, with large, violet bells having a protruding style, and carried on spikes of a foot or eighteen inches	.75	5.00
C. mirabilis—A very beautiful variety of Campanula for the rock garden, forming a flat rosette of glossy, saw-toothed leaves and bearing a fountain of light blue bells about half the size of those of Canterbury Bells	.75	5.00
C. muralis—Very dwarf plant covered with blue purple flowers in June. Fine for wall or rock garden	.75	5.00
C. muralis bavarica—An improved form of C. muralis with larger flowers on longer, more upright stems. Easily grown and fine for wall or rockery	.75	7.50
C. Palassi—Fine new variety with blue flowers on stems about two and one-half feet high. Blooms in July and August. Fine for hardy garden	.75	5.00
C. persicæfolia—(Peach Bells)—One of the finest border varieties, bearing large, blue, saucershaped flowers on long spikes, 3 ft. high. June and July	.35	2.50

	Each	Per Doz.
C. persicæfolia alba grandiflora—A fine variety of the above, with extra large blossoms. White	80.35	\$ 2.50
C. persicæfolia Mærheimi—A very fine variety of the Peach Bell, with spikes of double, pure white flowers	.75	5.00
C. persicæfolia—"Telham Beauty"—A grand variety, producing immense bell-shaped flowers of delicate china blue, in June and July; 3 ft	.50	3.50
C. pulla—Dwarf campanula of great beauty for the Alpine garden. Shining bells of deepest purple-blue on graceful, solitary stems, 3 inches high. June and July	.75	7.50
C. pusilla—One of the very choice rock bellflowers. Strong grower with a profusion of blue flowers during July and August. About three inches high	.75	5.00
C. pusilla—"The Major"—Bright blue blossoms. Charming for the rockery or edging	.75	5.00
C. pyraversi—A hybrid of C. pyramidalis. Beautiful, showy border plant about three feet high, with large blue blossoms in late summer	.75	5.00
C. Raddeana—A very handsome perennial, forming a compact bush some 12 inches high, with dark, wiry stems and large purple flowers. Very beautiful if planted near a low shrub in the rockery, to act as a light support for the beautiful blossoms	.75	5.00
C. rhomboidalis—A beautiful bellflower from the Alpine meadows. Deep blue bells on stems 18 inches to 2 ft. high, in greatest profusion. Very rare	.75	7.50
C. Robsoni—A new hybrid of Scheuchzeri and turbinata with large, deep blue bells on spikes	,50	3.50
C. rotundifolia—The wild blue English harebell; very graceful drooping blue bells, rising from compact tufts of foliage. Fine for rockery	.35	2.50
C. rotundifolia alba—Pure white form of this charming harebell	.50	3.50

E	ach	Per Doz.
C. rotundifolia Hostii—A large form of above with rich blue flowers. Very free	0.50	\$ 3.50
C. Sarmatica—A vigorous variety, growing to a height of a foot or so and laden with pale blue bells	.75	5.00
C. Stansfieldii—An easily grown and beautiful variety of bellflower. It forms a dwarf carpet of leaves and bears unusually large blue, somewhat drooping flowers. Charming in the rockery	.75	5.00
C. thyrsoidea—A native of the high Alpine meadows. Forms wide rosettes of hairy leaves, producing in June a stout stem closely packed with large bells of pale yellow	.50	3.50
C. Tommasiniana—A lovely Italian Alpine with narrow blue flowers on slender stems. It forms a dense tuft and flourishes in light soil on rock work; 9 in.	.75	7.50
C. turbinata—A beautiful variety, forming close mats of foliage and bearing large saucer cups of blue, siting close to the plant and fairly smothering it. June and July	.75	5.00
C. Waldsteiniana—A Hungarian rock plant of exquisite beauty. It has upright and star-shaped blue flowers on short stems. It does well in a cool part of the rock garden in gritty loam. Scarce and very choice	.75	7.56
CARLINA—Charlemagne's This	stle	
C. acaulis—An Alpine thistle with an immense, stemless flower head which, when dried, is silvery brown. Leaves are intensely spiny and very silvery, making a handsome subject for the rockery. Rare	0.75	\$ 5.09

CYNOGLOSSUM—Hound's Tongue

Hardy Perennial

DELPHINIUMS—Larkspur

Hardy Perennial

The Delphinium of today is one of the most beautiful of all flowers. It is most rich in coloring and very stately of habit. The foliage is very attractive and the spikes of bloom freely borne. A border of Delphiniums is one of the most glorious things in the garden and will often remain in bloom for two months.

The culture of Delphiniums is exceedingly simple, as they thrive in almost any position. A rich, friable loam will suit them finely. Dig deeply, add plenty of well-rotted manure and plant about 2 ft. apart, being very careful that no manure comes in contact with the roots.

Planted in lines or groups as a background for other plants, the effect is exceedingly fine. Copious watering in summer will greatly increase the size of spike and flower and top dressing is strongly recmended that the soil may not dry out and bake. Coal ashes strewn over the crowns will protect the plant from slugs and worms through the winter and spring.

While our stock of named varieties is still too small to offer, we have a large stock of a wonderfully fine strain of Delphiniums, which we list as Gibson strain. These range in color from palest blue to deepest purple, with hundreds of combinations. The individual blooms are of large size, averaging better than two inches in diameter and the spikes are unusually strong. Gardeners desiring exhibition blooms can depend upon this strain.\$1.00

We are also pleased to advise our customers that we have obtained a small stock of the wonderful "Wrexham" strain of Delphiniums, which have carried all honors at the Horticultural Shows in Great Britain. The blooms are of immense size and the spikes are very massive, many carrying five feet of bloom and measuring nine inches across at the base of the stalk.

We will not be in position to offer this stock before 1924, but we want our customers to know of the beautiful strain we have in store for them.

DIANTHUS—Pinks

Hardy Perennial

Almost all pinks are of the easiest culture in any well-drained soil and sunny position. Some of the choicest subjects for the Alpine garden are to be found among them, and we feel that we have a collection of which to be proud.

- D. alpinus (Alpine Pink)—This is one of the loveliest of all rockery Pinks, with glossy leaves and large flowers of brilliant rose, produced during June and July. It thrives best in loam with some lime added and perhaps a little shade during the hottest part of the summer. A gem for the rock garden: 6 in.
- D. arenarius (Sand-loving pink)—As its name indicates, this Pink delights in a sandy soil and sun. Flowers white with a carmine ring, deeply fringed and fragrant. Excellent for dry, hot places; 6 inches

\$ 5.00

	Each	Per Doz.
D. brevicaulis—A very dwarf species from the high Alps, forming a tight mat of toothed leaves and bearing rosy mauve flowers on solitary stems close to the plant. A gem for the rockery		\$ 7.50
D. cæsius grandiflorus — This is the "Cheddar Pink" and one of the best known of the family. It is very compact in growth and makes a cushion of glaucous leaves from which, in May, spring the sweet-smelling, rose-colored flowers, each on its own stem. It varies as much as from four inches to ten inches in height. It is easily grown and very fine for the wall or rock garden; 6 inches. True		3.50
D. cæsius Arvernensis — A delightful miniature form of D. cæsius, with the same lovely blossoms on stems of only two or three inches in height	.75	7.50
D. cruentus — Dense heads of flowers on long stems. Deep red. Fine border plant	.35	2.50
D. deltoides (Maiden Pink) — A beautiful little plant with narrow leaves and bearing a profusion of small crimson flowers during June and July. Easily grown on rockery		2.50
D. deltoides albus—A charming white form of the above variety	.35	2.50
D. deltoides "Brilliant"—A very choice variety of the above, bearing bright rose colored flowers		3.50
D. Falconeri—A small plant with extremely glaucous foliage, almost blue. Small, cream white blossoms in June. Exceedingly choice		7.50
D. Fischeri — Dwarf, tufted pink with white,, deeply fringed blossoms	,75	5.00
D. fragrans—An easy rockery pink, needing sandy loam and grit. It produces white fringed flowers. Fragrant	.35	2.50
D. Freynii—Exquisite rockery pink, forming tight rosettes of bluish foliage, covered with stemless blossoms of rose	,75	7.50
D. gallicus — Flowers purplish crimson, highly scented, on stems about one foot high	.35	*2.50

·	ach	Per Doz.
D. glacialis—Although this is listed by some as one of the difficult pinks, it has been of the easiest culture with us in gritty sand and peat. It has exquisite rose colored blossoms on short stems and is a real treasure for the rockery. Very rare	0.75	\$ 7.50
D. glacialis gelidus—An especially rare and beautiful form of the above	.75	7.50
D. graniticus (Granite Pink)—A glorified form of the Maiden Pink, rather taller and with large rose-colored flowers from June onward. Prefers a sunny place and a gritty soil. Especially fine for the rock garden	.35	2.50
D. kamtschaticus—Distinct rock plant and one of the best introductions of recent years. It is of trailing growth with large, deep pink flowers	.35	2.50
D. neglectus—One of the most beautiful wild Pinks in cultivation. The stems are about 6 inches high with deep rose-colored flowers, frequently borne two on a stem. No flower garden should be without this lovely Pink	.75	5.00
D. petræus—Tufted growth, about a foot in height, bearing a profusion of fringed, rose-colored blossoms. Very fragrant	.35	2.50
D. pyridicola —A very charming small rock pink. Compact growth, large bright pink blossoms on stems of three inches	.75	7.50
D. plumarius hybrids (Hardy Garden Pink)— Very easily grown and ranging from white to deep rose. Hardy Pinks are favorites with all gardeners and thrive in a sunny, well-drained po-		
sition Very fine strain	.35	2.50
with handsome, deep crimson blossoms	.35	2.50
D. plumarius "Maurice Pritchard"—Perhaps the finest single Pink. Robust constitution. Excep- tionally large pink flowers. Excellent for cutting	,35	2.50
D. plumarius "Mrs. Sinkins"—Large double white flowers. Very fragrant	.50	3.50

	ach	Per Doz.
D. seguieri—A late flowering species with rose crimson blooms on stems about a foot high\$	0.35	\$ 2.50
D. speciosus—A beautiful high Alpine pink with glaucous, blue foliage and erect stems bearing one or two deep rest, fringy blossoms	.75	7.50
D. superbus grandiflorus (Fringed Pink) — Very fragrant and bears deeply fringed flowers, ranging from white to pink or rose	.35	2.50
D. superbus Holtzeri—A very beautiful variety of the above. Blooms early	.35	2.50
D. sylvestris (Wood Pink)—Bluish foliage and salmon pink flowers on stems about a foot high. Likes an open, sunny place in stony loam and a slight covering of stone chips upon the surrounding soil is beneficial	.35	2.50
Hardy Carnations—The genuine hardy border carnation is a great addition to the garden. During the last few years great progress has been made in the culture of these plants and we take great pleasure in offering a strain from one of the best known growers in Scotland. They are perfectly hardy and bear in profusion blooms that are quite as large and just as handsome as the greenhouse variety. We guarantee these to be the true variety	.75	5.00

D. barbatus "Giant White"—A very fine large flowered pure white variety	2.50
D. Deep Crimson—Very handsome, deep red	2.50
DIGITALIS—Foxglove	

Hardy Perennial

The Foxglove has been a favorite in gardens since our grandmother's time and adds beauty and dignity to any planting. The newer varieties show exceedingly choice colorings as well as increased size in spike and bloom and in combination with Larkspur and Canterbury Bells, create a most charming spot in any garden.

Their cultivation is very easy if given a rich, friable soil and not treated too kindly by covering the crowns for the winter. Cornstalks, so placed that they do not mat down, make an ideal covering, as they must have air during the winter.

It is also well to remove some of the largest leaves.		
D. "Ayrshire White"—A very fine variety, producing large spikes of pure white flowers\$	0.50	\$ 3.50
D. "Giant Primrose"—A beautiful Foxglove with large flowers of cream or buff color	.50	3.50
D "Giant Spotted"—Beautiful spotted flowers in many different colors. Very large	.35	2.50
D. lanata—Very distinct, producing spikes nearly four feet high of deep cream-colored flowers with prown spots. Rarely seen in gardens. Very effective planted with Rudbeckia purpurea	,35	2.50
D. "Lutz Hybrid"—A new and attractive hybrid. Flowers of a light salmon color	.50	3.50

CAMPANULA MURALIS

DORONICUM (Leopard's Bane)

Doronicums are splendid subjects for moist or heavy situations in the garden. Especially valuable occause of their early blooming.

DRABA—Whitlow-Grass

Hardy Perennial

One of the important spring flowering plants for the rockery. Very dwarf and compact with numerous small flowers in early spring. They require an open soil and sunny position.

D. aizoides—Forms beautiful little rosettes of hairy leaves, covered in spring with bright yellow flowers about 2 inches high	0.75	\$ 5.00
D. Athoa—Very handsome species from the mountain tops of Greece. Spiny foliage, forming close mats which are covered in early spring with yellow blossoms on stems three inches high. Rare	.75	5.00
D. borealis—Forms a rosette of slightly cæspitose leaves and in spring bears white flowers on stems from two to twelve inches high. Rockery	,50	3.50
D. cuspidata—Forms dense rosettes of downy foliage. Wide flower heads of deep yellow on short stems	.75	5.00
D. Dedeana — From northern Spain. Forms a dense tuft covered with small white blossoms in early spring. Fine for rockery	.50	3.50
D. hirta—A very hardy species from the Arctic regions. Produces a profusion of white flowers from March to May. Fine for rocks	,75	5.00
D. lasiocarpa—Very attractive rosettes of densely hairy leaves bearing umbels of deep yellow flowers in early spring	.75	5.00

Each Per Doz. D. repens—A graceful plant of trailing growth with numerous bright vellow flowers in early spring. streptocarpa—Foliage clothed in gray down, with blossoms of white on stems three to six inches high75 5.00 DRACOCEPHALUM—Dragon's Head Hardy Perennial A very valuable class of plants for moist, shady positions. They do not bloom well where it is dry and sunny. D. argunense - Fine variety, about ten inches high, with a profusion of blue blossoms in June \$ 3.50 D. austriacum—A dwarf variety of great beauty with small, narrow foliage and large blossoms of blue on stems of about twelve inches. GENTIANA—Gentian

Hardy Perennial

The Gentians furnish the rock garden with some of its most glorious subjects. While many are extremely difficult, others are comparatively easy and all will repay any effort made to give them conditions to their liking.

Nearly all Gentians enjoy peat mixed with light loam and fine stones. They also require moisture during the summer and complete dryness during the winter. They do much better if planted close to other low growing or carpeting plants; like thin grass. Not, however, of a rampant nature, or they will soon be run out.

Top dress in spring with coarse sand, or very small stones, partially covering the tufts, that it may work down between the shoots.

GERANIUM—Crane's Bill

Hardy Perennial

- G. Endressi—Dwarf variety suitable for the hardy border or rock garden. Rose colored flowers on stems about a foot high, lasting for many weeks..\$0.75
 \$ 5.00

Gentians furnish one of the most glorious blues in the Garden.

HOLLYHOCK—Althæa Rosea

Hardy Perennial

No hardy garden is complete without the stately and majestic Hollyhock. They lend beauty to the hardy border or shrubbery which cannot be secured with any other plant.

The Hollyhock requires a deeply dug, well enriched soil and should be well supplied with water during the summer months. They will live and thrive for years if protected around the collar with sand or coal ashes during winter, and if the stem is left a foot or so high instead of being cut to the ground it will prevent the crown from rotting.

So far as we know, there is no absolute cure or prevention of the Hollyhock disease, but we are pleased to give our patrons the benefit of a remedy found most effective by the specialists in England.

No discount given to Estates, Parks, Landscape Architects or others not in the Nursery Business.

"Slack one peck of lime and when cool add one peck of soot, 1 pound of flowers of sulphur and half an ounce of sulphate of copper (finely powdered). Pass the mixture through a fine sieve and dust the plants well over with it three or four times during the growing season, preferably early in the day while the dew is still on the plants."

We are pleased to again offer the Chater strain of choicest named varieties. These are the true, original strain, direct from the growers and we feel are a great acquisition to the garden lovers of this country. They are a revelation in Hollyhocks and only need to be grown beside the ordinary strains to be fully appreciated.

be fully appreciated.		
H. Amaranth—Large flowers of deep amaranth pink. A very distinct variety\$	0.75	\$ 5.00
H. Britannia—A fine scarlet. Very bright color and large, compact spike. Certificate of Merit R. H. S.	.75	7.50

HARDY PHLOX

Hardy Perennial

These beautiful hardy border plants are among the most effective things in the garden during the late summer and fall months. The varieties have been much improved during the past few years, both as to color and size of pip. To be at their best, they require soil which has been deeply enriched and plenty of water during the blooming period. It is also well to remember that they should never be allowed to go to seed and should be divided every three years, or they will become small and in not a few cases, change their color.

We have tried to confine our list to the very best of the numerous varieties offered and can safely say there is not a poor variety in the lot.

E	Each	Per Doz.
Athis—Deep, clear salmon. Very fine	80.35	\$ 2.50

attractive	2	.50

PHYTEUMA—Horned Rampion

Hardy Perennial

A small race of Alpine plants from the Mountains of Europe and Western Asia. Very frail in appearance, with balls of bloom quite unlike any others. They are all very rare but thrive well in sandy peat and loam, with perfect drainage.

P. Scheuchzeri — One of the choicest Alpines,	
forming close masses of deep green foliage and	
bearing graceful balls of deep blue on foot high	
stems in July. Very rare\$1.00	\$ 7.50

P. s. Charmelii—A rare variety of P. Scheuchzeri,		
smaller in all its parts	1.00	7.50

PLATYCODON—Chinese Bellflower

Hardy Perennial

These are closely allied to the bellflower family and derive the name of "Balloon Flower" from the shape of the buds. They enjoy a very rich, loamy soil and are most attractive plants for the border, bearing blue blossoms for about a month or six weeks, beginning about the middle of July. They are best planted when quite young, as they do not bear disturbing after once established.

Per Doz.	ach	E
		P. Maresii—A splendid variety of dwarf habit with very large flowers of a purplish blue color\$

P. Munstead Strain—In shades of yellow, from cream to dark orange, selected and perfected by Miss Jekyll of England	3.50
P. Pink and Red Shades—Very handsome, ranging from light to dark red, with yellow eye	3.50

PRIMULA—Primrose

Hardy Perennial

A race of plants little known in America, but forming one of the most attractive features of the spring garden. They are perfectly hardy in our Michigan climate and once established are as sturdy as our oaks. The different varieties range in size from four inches to three feet, and in time of blooming, from early April until late summer.

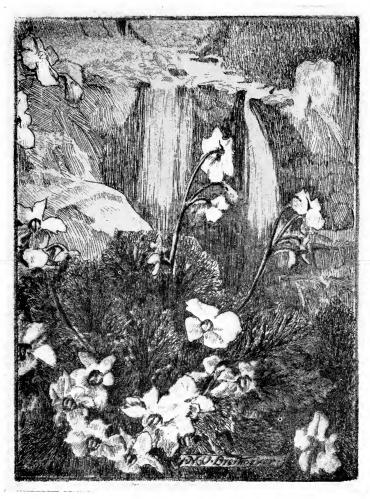

Do not try to compel Primroses to grow in hot, sandy places for you will only meet with failure. They need at least partial shade and while they enjoy moisture at the roots, they must have good drainage or they will rot at the crown. Also be particular when planting that no dirt is left on the crown, as it seems to smother them.

We have found hard coal cinders excellent for drainage. In fact, the majority of rock plants seem to like a few cinders mixed with the soil.

P. auricula alpina—One of the treasures of the rock garden. The growth is very attractive, forming rosettes of thick leaves, sometimes farinose or mealy. From these rosettes the flower stalks rise to a height of six or eight inches, bearing heads of bloom of various colors and exceedingly fragrant.

Their native home is in the rocks, where they are constantly supplied with moisture at their roots. Give them a mixture of peat, leaf mould, and sandy loam, with plenty of stones mixed.

Our strain is from the great Primula specialist		Per Doz.
in Scotland and comprises a wide range of colors	80.75	\$ 5.00
P. auricula Mrs. S. Robinson—A very handsome variety with large heads of deep yellow flowers	.75	5.00
P. "Alannah" — A beautiful Primrose between Bulleyana and Beesiana. The flowers are bright coppery red, shading deeper to eye, which is of rich yellow. Very new and very choice	1.00	7.50
P. "Asthore"—Coppery old rose flowers, tinged with heliotrope and shading deeper to the yellow eye	.75	7.50
P. Beesiana—Distinct type of Bulleyana and pulverulenta but later than either, with flowers of various shades of purple with yellow eye; 3 ft	.75	7.50
P. Bulleyana—A beautiful species from Yunnan. Flowers rich golden yellow, shaded orange buff, borne in whorls on stiff stems. 2 ft	.75	7.50
P. Bullesiana Hybrids—A new strain of Hardy Primuals with the constitution of P. Japonica resulting from the crossing of P. Bulleyana and P. Bessiana. Colors range from cream to many shades of yellow, orange, purple, lilac, pink and crimson. They are very hardy and prefer a half shaded position that is fairly moist	.75	5.00
P. capitata—Producing dainty heads of handsome violet blue flowers, dusted with a white mealy powder. Likes a partially shaded, moist position; late. 1 ft	.75	7.50
P. cashmiriana—Flowers much the same as denticulata but of a deep purple	.75	5.00
P. Cockburniana—A lovely species recently introduced from Western China, bearing scarlet flowers in whorls; very striking. Makes a wonderful combination of color planted with Bulleyana. 1 ft	.75	5.00
P. cortusoides—A distinct Siberian species, with soft, wrinkled heart-shaped leaves. Flowers in early summer, deep rose. Prefers light, rich, well-drained soil, in a sunny position, in border		
or rockery; 10 inches	.75	5.00

RAMONDIA PYRENAICA

	Each	Per Doz.
P. crispa—Similar to capitata. Prefers a boggy place	\$0.75	\$ 7.50
P. denticulata — Very handsome, large flower heads, in various shades of lilac. One of the first to bloom. Prefers a moist, shady position; 2 ft.	.75	5.00
P. denticulata alba—A beautiful white form of the above; 2 feet	.75	5.00
P. farinosa—Silvery foliage and rosy purple flowers; 1 foot	.75	5.00
P. Forresti—A beautiful variety recently intro duced from China. Flowers on slender stems, deep orange, and very fragrant. Prefers well drained, half shady position in rock garden	.75	7.50
P. frondosa—Similar to farinosa, with rosy lilac blooms	.75	5.00
P. involucrata—Lovely in a damp, shady place; umbels of white, drooping flowers. 1 ft	.75	7.50
P. Japonica Hybrids—A fine strain of this beautiful Primrose in shades of crimson. Extra fine strain	.50	3.50
P. "Lissadell Hybrid"—A cross between pulver- ulenta and Cockburniana. Very vigorous with flowers of a beautiful soft vermillion; 2 ft	.75	7.50
P. "Ailin Aroon"—Another cross between pulver- ulenta and Cockburniana; flowers light scarlet	.75	7.50
P. "Red Hugh"—Intense fiery red. Very new and exceedingly choice	1.00	10.00
P. longiflora—On the order of P. farinosa but larger and more robust. Protect from winter dampness. Very choice	.75	7.50
P. luteola—Heads of pale yellow blossoms about six inches high. Robust plant and very attractive	.75	5.00
P. Poissoni — Very handsome Primrose from Northern China. Light foliage and flowers of a deep purple with a bright yellow center, in whorls. June and July; 2 ft	.75	7.50
P. pulverulenta—Rich crimson in color, in whorls, on stems 3 ft. high. One of the finest varieties	.75	5.00

I	lach	Per Doz.
P. pulverulenta, "Mrs. Berkeley"—A very beautiful form of pulverulenta, having pale, blush flowers with a saffron eye. Very choice; 3 ft	80.75	\$ 7.50
P. rosea—A handsome species, native of Kashmir. Leaves bright pale green and flowers in early spring of a bright rosy carmine, with yellow cen- ter. Prefers moist, loamy soil in rockery or on banks of streams; 6 in	.75	7.50
P. Veitchii—A Chinese species, producing numerous stems with heads of rose purple flowers; 1 ft.		5.00
P. "Wilson's Blue" — A fine novelty, producing many charming shades from deep violet to lavender	.75	5.00

PYRETHRUM—Persian Daisy

Hardy Perennial

RAMONDIA—Pyrenaica

\$ 3.50

Hardy Perennial

We take much pleasure in offering our patrons this very choice and interesting gem of the rock garden. The densely hairy leaves form a flat rosette, throwing scapes of exquisite violet blossoms with yellow centers.

They should be planted in a cleft of the rocks, so water cannot lodge in the crown, in a mixture of coarse sandy peat.

Well established plants\$1.00 \$10.00

RUDBECKIA—Cone-Flower

Hardy Perennial

Fine plants for the hardy border and very easily grown.

SAPONARIA—Soapwort

Hardy Perennial

SATUREIA—Savory

Hardy Perennial

SAXIFRAGA—Dactyloides—Mossy Saxifrage

Hardy Perennial

The Mossy Saxifrages are ideal plants for amateurs. They form perfect little carpets of evergreen that quickly spread over the ground or cover the stones with beautiful, close-tufted verdure, which, in spring and early summer, become jeweled with sprays of blossoms in pink, white or red. Most of them are easy to grow and ordinary, well-drained, loamy ground, with which pieces of grit or stone have been mixed, suits them admirably. They prefer half shade to full sun.

WOLCOTT NURSERIES	69
Each S. muscoides Magnifica—Largest flowering of all.	Per Doz.
Flowers clear crimson \$0.75	\$ 5.00
S. muscoides Rhei superba — Deep rose colored flowers; 4 inches	5.00
S. aquatica—Handsome mossy saxifrage with very finely cut foliage and tall, branching stems bearing sprays of brilliant white flowers	5.00
SAXIFRAGA—Euaizoonia—SILVER ROCKFOIL	ĽΥ
Hardy Perennial	
A class of very beautiful plants, natives of the European Alps and Arctic regions. They all have lime encrustations on the foliage, making them glorious subject for the Rock Garden. They thrive in light, well drained stony loam, with a little lime added, but must be planted flat against the rocks in such a manner as to prevent water lodging in the crowns.	
S. æizoon — A treasure for the Alpine garden, forming rosettes of silver beaded leaves and bearing plumes of creamy white blossoms, eight to ten inches high, in early summer	\$ 7.50
S. longifolia—Called the "Queen of Saxifrages." Beautiful encrusted rosettes, lovely enough in themselves; but the crowning glory is the immense panicle of white bloom, one to two feet long. Should be planted flat against the rock. Our stock is direct from the Pyrenees Mountains .75	7.50
S. Macnabiana — Another very choice encrusted, requiring same treatment as all the Euæizoons. Panicles of white blossoms, spotted red	7.50
Splendens—(longifolia x Cotyledon)—One of the very choice hybrids of the encrusted section. It has more of the longifolia rosette and the looser infloresence of the Cotyledon parent. A most attractive plant for the rock garden, the silvery	

7.50

SAXIFRAGA—Megasea

Hardy Perennial

A most effective class of plants having broad, deep green foliage which takes on most beautiful tints in the fall. They are perfectly hardy, their only demand being stones around the roots, which makes them very desirable for the rock garden. The flowers are borne on stout stems well above the foliage and are very handsome, ranging in color from palest pink to rose and purple. We are able to offer Smith's hybrids, which are the finest grown

SCABIOSA—Blue Bonnet

Hardy Perennial

S. caucasica—Beautiful soft blue blossoms on long stems from June to August. Fine for cutting\$0.35	\$ 2.50
S. c. "Magnifica"—New. Very beautiful variety of perfect form and substance. Exquisite shade of sparkling blue, the stamens tipped with pink 1.00	10.00
S. c. "Rosamond"—Almost identical with "Magnifica" except in color, being a true silver blue 1.00	10.00
S. graminifolia—Dwarf habit, flowers pale violet; 18 inches	5.00

Hardy Perennial

TUNICA—Coat Flower

Hardy Perennial

VALERIANA—Valerian

Hardy Perennial

One of the most popular of the old-fashioned garden flowers and of the easiest culture.

VERBASCUM—Mullein

Hardy Perennial

Verbascums, commonly known as mulleins, have been greatly improved in recent years. We know of no plants more noble or picturesque than these newer varieties. Their pyramidal spikes, towering up among other border plants are just the flowers to give the whole border a light, graceful and most natural appearance.

Roots should be given a good, deep soil, but well drained and very sandy. When the stems are cut down in the fall cover the crowns well with ashes or sand. The crown may sometimes appear to be dead, but the roots are still alive and should not be disturbed.

V. "A. M. Burnie"—Branching spikes of rosy-fawn flowers. 4 ft\$	0.75	\$ 5.00
V. chaixii—A fine border plant with long spikes of yellow flowers	.35	2.50
V. chaixii album — A beautiful white flowered counterpart of the above	.35	2.50

W. vincæflora—A native of Australia and New Zealand, this beautiful new perennial bears large blue flowers on stems from 9 to 12 inches high. The color is exquisite and it is a gem for the rock garden	.50	3.50

Evergreens

Choice Dwarf Evergreens

Suitable for the Alpine Garden

In the planting of Alpine Gardens, the fact should always be kept in mind that Evergreens are a most important part of the garden scheme.

The very name of Alpine Garden suggests the high altitudes of the snowy Alps with the deep gorges and ravines clothed in the warm, fragrant, ever beautiful Pines.

It is, of course, impossible to use the same varieties of large Evergreens in the man-made garden of infinitely smaller proportions. However, the dwarf types of conifers readily lend themselves to the smaller scale of their surroundings and are at home among the rocks, where they are vitally essential in producing the effect of distance and depth, so necessary in making a naturalistic picture.

Another very important part of their use is in the softening of the garden color. They form a connecting note with the higher tones, producing an effect of perfect color harmony.

5 Plants of one variety at the 10 price.

JUNIPERUS CANADENSIS— Common Juniper

Each Per 10

Excellent ground cover. Rarely exceeds two feet in height and delights in sandy or gravelly hillsides, fully exposed to the sun. Foliage graygreen and very dense. Trims well.

Hints for the Planting and Care of Shrubs

Planting and Preparing Soil for Shrubs

If the ground is not ready or the weather is unfavorable when shrubs are received, great care should be taken not to allow the roots to become exposed to the air. A half hour's exposure to the sun or wind will quite often be enough to badly stunt or kill a choice shrub. If it is not possible to heel the shrubs in the ground until ready to plant, they should be placed in a dark, cool place with moist burlap or straw placed over the roots.

In planting, square holes should be dug for each shrub about twice the size of the roots and if the soil is poor the holes should be made extra deep and rich soil placed in the bottom.

When the shrub is placed in position, at a depth about the same as previously planted, a small amount of soil is thrown over the roots; a thorough packing of this soil is then necessary to preclude the possibility of any air spaces. When thoroughly packed in, the rest of the soil may be firmed about the shrub, care being taken to leave the surface loose and flat so that the rain may penetrate to the roots.

Trimming and Shearing of Shrubs

Shrubs that are planted in masses should be pruned only by taking the larger stalks off at the ground, thus checking a too rampant growth. Individual or specimen shrubs should always be allowed to take their natural, graceful outline.

Beware the "handy man" who comes along with claims of vast knowledge of all things pertaining to gardening. He will often endeavor to shear a beautiful shrub as a barber would a man's head.

Early flowering shrubs bloom on last season's wood and should be trimmed after blooming, while later flowering shrubs make their bloom on the same season's growth and should be pruned very early in the spring.

AMELANCHIER CANADENSIS— (Service Berry)

A large shrub sometimes growing into a tree 30 feet high or more. White blossoms early in August. Fine for background.

MALUS IOENSIS VAR. BETCHELI— (Betchel's Crab)

This is a beautiful tree for specimen planting. The masses of delicate pink, double flowers fill the air with a delightful fragrance in early spring;

\$12.50	\$1.50	feet	to 3	2
17.00	2.00	feet	to 4	3

All of the Hypericums are lovely for well drained places in full sun.

PHILADELPHUS—(Syringa)

This shrub of ancient origin was named for the Egyptian king, Ptolemy Philadelphus, who reigned from 285 to 247 B. C.

These handsome flowering shrubs deserve a good place in the shrubbery border, for without plenty of sun and air and a well enriched soil they will make but a poor growth. When given these requirements the blooms of pure white often attain an individual size of two and one-half to three inches across.

Trim after blooming as flowers are borne on last year's wood.

Memorandum

Memorandum

Wolcott Nurseries are located North and West of Jackson, about five miles on Clinton Road, from Main St., City of Jackson.

Turn from West Main St. north on Blackstone St., cross R. R. tracks, take left hand fork (Lansing Ave.) up hill and on to O'Halloran's filling station. Take left hand fork at filling station (which is Clinton Road), direct to Nursery, three miles. From Clinton House (now a grocery store), take right hand fork of road.
